For the improvement on my survey, it was decided that that having questions that would involve rating a situation or questions using a number system. This was a great idea, but I had very little idea what kinds of questions to ask to get a valid response. I wasn't sure the usefulness of the result, but I decided that based on my current reaction to this task- it may have been better to at least try to find material.

Rate the Lesson	
Subject: _____	
Date / Time: _____	
The part of the lesson where we had a discussion was interesting.	1 2 3 4 5
The instructions I was given about the assignment were clear.	1 2 3 4 5
The assignment I was given helped me to understand the material	1 2 3 4 5
The amount of noise in the classroom was appropriate. I could complete my work.	1 2 3 4 5
The amount of time I had to work on the assignment was good.	1 2 3 4 5

While mostly fruitless research, I came across this printout. It's rather simple- this makes it perfect for what I needed. All the questions could be easily applied to any educational situation and would not need to be edited to fit my target audience or my theme of science- each one would also give me useful insight into some aspect that and be analysed for some insight on the solution or the problem.
